DURAN® Venting Membrane Screw Caps

- Caps can be tightly closed as the membrane permits an automatic sterile gas exchange, allowing safe pressure equalisation during the autoclave cycle, and at the same time ensuring the sterility of the bottle contents
- Microporous structure of the ePTFE membrane enables sterile gas exchange in two directions, while blocking the penetration of liquids or solids and the bottle contents remain sterile
- Increased gas exchange rate due to thin 0.2µm ePTFE membrane, combined with larger ventilation openings
- PTFE membrane and its polypropylene mesh support are ultrasonically welded in place forming a durable seal
- Cost effective as the caps can be reused several times (replacement is recommended after 3 to 5 autoclave cycles, or if the membrane becomes damaged or contaminated)
- ePTFE membrane conforms to USP 121°C Class VI with polypropylene mesh
